

# The Supervisor's Role in Safety

Date/time: Tue. Sept. 20<sup>th</sup>, 2011, 8:00am–10:30am (2.5 hr. workshop)

Location: Cal Marine, 2049 Main St. San Diego, CA (619) 231-8788

## Introduction:

Last month, during our Safety and Health Management Systems (SHMS) class, we discussed the reasons that an effective safety and health management system is a smart business practice. An effective SHMS results in lower injury and illness costs, improved employee morale, and increased production. Your front-line supervisors are a critical, **likely the most critical**, element in implementing an effect SHMS.

Your supervisors may already be aware of their responsibilities regarding quality, cost and schedule. Are they also aware of their responsibilities related to health and safety? Whether they are conducting a hazard assessment or taking prompt action to correct an unsafe condition, they must understand that a key part of their job is the health and safety of their workers.

**Course Purpose:** To provide the participant with key information to support them in keeping their workers safe and healthy.

**Target Audience:** Front-line, shipyard supervision

## Course Topics:

- Importance of accident prevention
- Workers Compensation
- Your role as a supervisor
- Inspiring safe behavior
- Training your team
- You set the example!
- Hazard Assessment and Control
- Accident investigation
- Legal Responsibilities
- Summary
